

AP CSP | Create Submission Self-Check

A + B | Review your own work against the official directions

Use this as a reminder, not a scoring rubric. Consult the linked official documents for full requirements. Do not submit this sheet or publish your formal work.

A | Program code: one complete, readable PDF

- ☐ Include all program code. Keep comments and acknowledgments for external code, media, data and AI assistance.
- ☐ The program includes input and related output, and a list or other collection that stores and uses data to manage complexity.
- ☐ Include a student-developed procedure with a meaningful parameter, its name, and a return type if needed. A built-in function or event handler alone does not meet this requirement.
- ☐ Sequencing, selection and iteration are included in the selected procedure body. The program calls that procedure.
- ☐ Open the exported PDF and check every page for readable, complete code. If using screen captures, use a font of at least 10 points.

B | Video: independently created, one file

- ☐ Show the program running: input, at least one aspect of functionality, and output.
- ☐ Keep the video at or below 60 seconds and 30 MB. Accepted formats: .webm, .mp4, .wmv, .avi or .mov.
- ☐ Exclude identifying information and voice narration. Text captions are allowed; program audio output is allowed.
- ☐ Play the actual exported video file before upload. Submit a video file through Digital Portfolio, not a streaming link.

AP CSP | Create Submission Self-Check

C + final submission | Select references independently; verify all three components

C | Personalized Project Reference (PPR)

- ☐ Use the official image fields. Include the procedure definition, a call to that same procedure, list storage, and use of that same list to fulfill the program purpose.
- ☐ Select code from your own actively developed or actively co-developed formal program. Choose and capture the PPR evidence independently.
- ☐ Remove all comments and course content from PPR captures. This differs from the complete code PDF, where acknowledgments must remain.
- ☐ Make text readable at 10 points or larger; 12 points is recommended. The four code items do not imply exactly four images: each image box allows up to three screenshots.
- ☐ Save in the official form and inspect the generated PDF / print preview for missing, clipped or blurry code. Do not replace the form with an arbitrary PPR PDF upload.

Final check in the official Digital Portfolio

- ☐ Confirm your exam registration/order with your school or AP coordinator. Check the correct course and programming language field.
- ☐ Review the latest version of each component, complete the required attestations, and use Submit Final for program code, video and PPR separately. A draft upload or Save is not final.
- ☐ Verify final submission status for all three components before 30 April 2027, 11:59 p.m. Eastern Time. Keep confirmation privately.
- ☐ If a teacher returns a file for a permitted technical/format reason, correct it and finalize it again before the deadline. A PPR not finalized by the deadline is unavailable on exam day.
